

# **Batt Screed 6000**

**The World's First Battery Powered Roller Screed**

# No Cords. No Hoses. No Fumes.

With an ever fluctuating economy and variable labor market, contractors are constantly looking to increase production without losing quality. Curb Roller Manufacturing is dedicated to providing contractors with innovative cost and labor saving solutions. The patent-pending Batt Screed offers unparalleled mobility, precision, and efficiency to contractors of all sizes.

## **BATTERY POWERED**

Has a removable and rechargeable 60-volt lithium ion battery for impressive power and run time.

## **ADJUSTABLE TUBE LENGTHS**

Comes with expandable tube inserts that allow easy transition between tubes 3 ft. to 22 ft. long.

## **PIVOTING & FOLDING HANDLE**

A three position handle allows more pulling positions and folds/locks for compact and lightweight transport.

## **CUSTOMIZED CONTROL**

Adjustable right or left hand speed control, and variable speed in both high and low ranges.

All Steel Housing | Easy Attach Chuck | Unparalleled Mobility & Efficiency

## Power When You Need It.

The Batt Screed 6000 gets its power from a removable and rechargeable 60-volt lithium ion battery. Depending on the slump and pipe length, one fully charged battery is estimated to screed off 1800-2500 square feet.

While offering all the advantages of a standard roller screed, the Batt Screed maintains a lightweight, mobile, and versatile design. With the adjustment of one bolt, the variable speed lever can be switched from the right to left side allowing you to tackle any job without having to worry about comfort. This feature and more compile to save both time and physical stress.

Pipe Sold Separately | Machine 1 Year Warranty | Batteries 3 Year Warranty

# Transport With Ease.

Don't get stuck awkwardly moving your roller screed again! Unmatched by any other concrete roller screed, the Batt Screed 6000 is equipped with a special three position handle. This feature not only allows the operator to adjust how they pull the machine, but also how they transport it. When the Batt Screed is not in use, the handle quickly folds in and locks to ensure safe transit without needing to remove the battery.

Three Position Handle | Locks For Transportation | Removable Kickstand

Works On Any Size Pour | Attain Flatter Surfaces | Easily Change Pipe Lengths

## Any Pour. Any Size.

The BATT Screed 6000 is perfect for small and large jobs alike. From bike trails, golf cart paths, garage pads, and driveways, all the way up to large shed floors, grain bin pads, and 10,000+ ft parking lots, this machine can help you accomplish it all! The BATT Screed comes standard with two 12 AH batteries and can run off of any other FlexVolt battery. For pours larger than 6000 sq ft. it is recommended to purchase additional batteries if you don't have any other FlexVolt available.

Shipping complete with everything except the SCH40 aluminum pipe in a 5x18x32 inch box, the Batt Screed is the solution for contractors of all sizes who want a cost saving way to get more flatwork done in less time with a better flatter finished product. You will be impressed with the power and functionality of this easy to operate screed!

# What Makes It The Best.

Defined and easy to control variable speed lever. This lever can be moved from the right to left side easily with one bolt.

Don't settle for 'ok'. Go for the best thanks to the all steel housing and easy access door that protects the battery and drill from moisture, concrete, and accidental impact.

Made with the operator in mind, the positional and floating handle allows you to pull from other angles. The handle also folds and locks for compact and lightweight transport.

Our patent-pending stainless steel chuck is designed to keep the drill from disconnecting from the pipe in almost any situation while also allowing for a quick one pin disconnect.

The design and placement of the heavy duty kickstand allows an operator to leave the screed free-standing during a pour without catching rebar, formwork, or falling down. Kickstand can also be removed and placed in back of handle for easy transport and storage.

These are the best roller screed ends on the market! The heavy duty rubber inserts allow for quick and easy transfer from one length of pipe to another. The ends are easily removed and attached to 4" SCH40 aluminum pipe with three half-inch bolts that expand the rubber when compressed.

Because our drive and static pipe ends are the same, our static end attaches just like the drive chuck with one pin connect and disconnect. This feature allows the operator to change drive ends without moving the pipe.

Our lifting handle is designed for convenience and safety. The handle is located to allow the operator to lift without bending over or putting hands in an unsafe position.

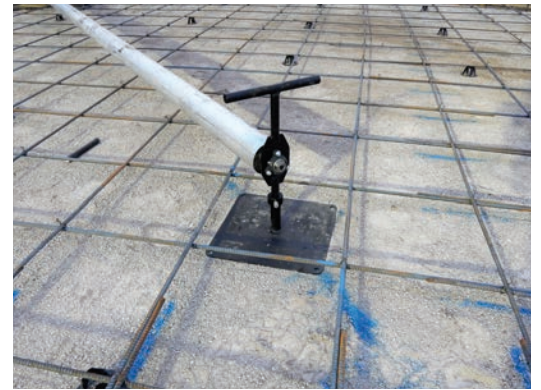

## Power and Portability.

The Batt Screed utilizes a rechargeable 60-volt lithium ion battery for impressive power and run time. Unlike gas, electric, and hydraulic roller screeds, the Batt Screed eliminates exhaust fumes, power cords, and hydraulic power sources all while giving the same results.

Designed for quick assembly and break down, the single pin connection on both ends allows the operator to remove the pipe from the handles in less than a minute while allowing easy transport between different areas of a work site. The removable ends are quickly able to be installed in pipes from 3 ft. to 22 ft. long. With all these advantages, the Batt Screed is the system of choice for projects ranging from elevated floor pours to small decorative patios.
